

So basically, humor is what I do best when it comes to creative endeavors. This website will be for a fictional restaurant which nobody in their right mind would ever want to eat at. The main page will have a picture of the joint, and a little 'about us' section. The 3 other pages will list our entrees, desserts, and cocktails. All of the items will be disgusting.

1. The webpages should be presentable as a whole; the interface should be user friendly (text should be easy to read).

Ok.

2. The website should contain pictures and/or videos, and they should be presentable as well (placed in a proper place, easy to see, have proper size and resolution).

Ok

3. Website has 1 homepage and at least 3 subpages; the homepage and subpages have a horizontal menu that leads to the other pages. This means 4 total pages will be required.

Home page, entrees, desserts, cocktails.

4. The homepage has picture carousel animation (slideshow effect, for example, pictures in this page <https://mobirise.com/extensions/lightamp/carousels-and-sliders.html> (Links to an external site.)Link (Links to an external site.)). This needs to autoscroll and have forward and back buttons.

These will just be photos of a few menu items.

5. Have a scroll box in one page. You can put text only or text with pictures inside the scroll box. The scroll box should have something like a scroll bar to allow users rolling it up and down. Some students have scroll boxes show up after submitting the form, if this is the case make sure you add a comment to the grading TA letting them know.

This will be a nearly hidden disclaimer warning people not to eat here.

6. One page has a form either submit via get or post (enter the email and subscribe, a short survey, etc.) You can set it to be submitted to http://web.engr.oregonstate.edu/~zhangluy/tools/class-content/form_tests/check_request.phpLinks to an external site. or your own link as long as it is working. Forms that do not actually transmit the data somewhere will not receive full marks.

This will be a comments/suggestions/review

7. One page has unordered HTML list with several entries. The horizontal menu does not count for this requirement.

The 3 sub pages will all have lists

8. There is one button to download files (map to the farm, menu in the restaurant, a personal CV, etc.) The downloaded file can either open in the browser or download to the local computer.

Menu pdf

9. There is a link that you can click and leads to outside webpages (LinkedIn, Yelp, email, etc.)

I have a few ideas for this one.

10. You are allowed to add other features not listed above to your website as long as they are functional and serve some purpose in your website.

Ok

11. You should use at least HTML/CSS and JavaScript in your project.

Ok.
